July Market Commentary

U.S. stocks staged a sharp rebound in July, recovering from a historically poor first half. The S&P 500 and Dow Jones Industrial Average both posted their best month since November 2020, climbing 9.1% and 6.7%, respectively. The Nasdaq Composite jumped 12.4%, notching its strongest performance since April 2020. Still, the tech-heavy index remained in bear market territory (defined as a 20% drop from a recent peak). Notably, all three major averages eclipsed their 50- and 100-day moving averages (closely watched technical levels) as depressed positioning and sentiment indicators were widely cited as supportive of equities. Oil prices fell amid recessionary worries, with West Texas Intermediate crude dipping below \$100/barrel for the first time since April. Corporate earnings from mega-cap companies lifted the mood as results from big tech names came in "better-than-feared." Still, warnings from key retailers underscored inflation headwinds pressuring consumer spending.

Optimism over a potential Federal Reserve (Fed) policy pivot also bolstered risk appetite. After the Consumer Price Index (CPI) indicated inflation accelerated to a fresh 40-year high in June, the U.S. central bank implemented a second straight 0.75% rate hike. Still, investors latched on to post-meeting comments from Fed Chair Jerome Powell suggesting the magnitude of rate increases could eventually slow. Also supporting the hope that peak policy tightening could be nearing, the latest Gross Domestic Product (GDP) print showed the U.S. economy unexpectedly contracted during the April-June period. This marked a second consecutive negative reading and met one widely-cited definition of a technical recession. Treasuries strengthened, with the yield on the 10-year note sliding 36 basis points (0.36%) to 2.66%, the lowest level since April. Notably, the yield on the shorter-dated two-year note ended the month at 2.88%, with the gap between the two yields the most negative since 2000.

^P indicates an account included in the performance information within the report.

Last updated date depicted represents the most recent date market values have been updated.

Internal investment assets are automatically updated. Please review the "Last updated" date for all other assets and liabilities and provide updated values to your financial advisor.

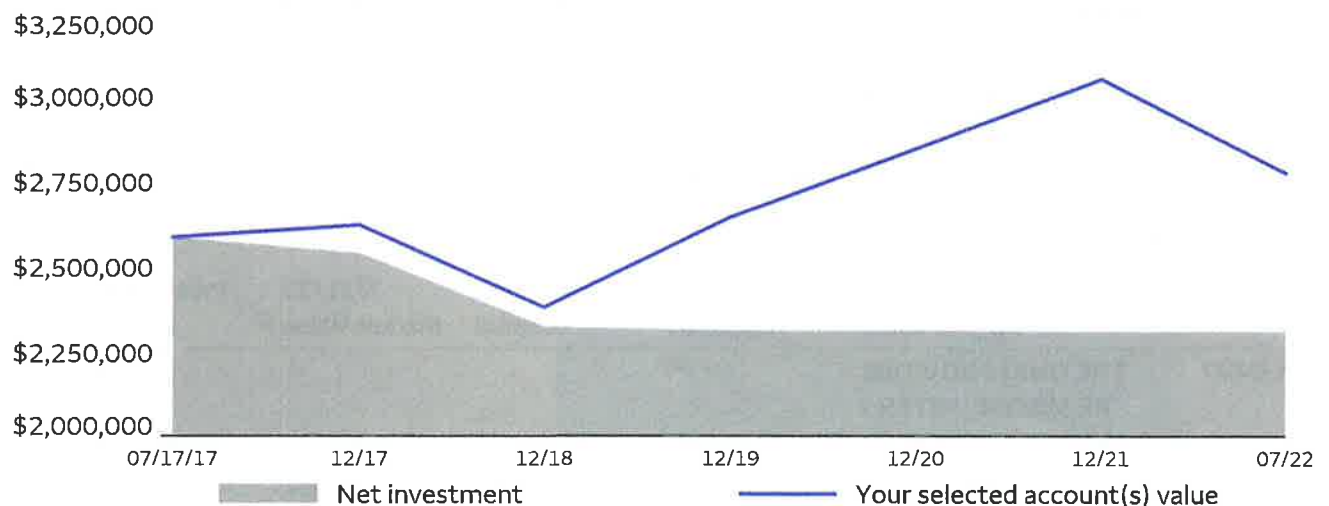

Asset allocation

Your current portfolio allocation may classify assets based on the underlying holdings of funds, ETFs, UITs and annuity sub-accounts. For funds in alternative investment strategies and where underlying holdings are not available for classification, the asset class assigned to that security is used.

Asset allocation depicted above is based on the account(s) designated with a P on the "Net worth statement" earlier in this report.

Value vs. Net Investment

	Beginning Market Value	Net Additions	Net Invested Capital	7/31/22 Market Value	Investment Results	Cumulative Return
Year-to-date 1/1/22	\$3,043,289	(\$50)	\$3,043,239	\$2,768,265	(\$274,974)	(9.04)%
Since 7/17/17	\$2,579,022	(\$273,235)	\$2,305,787	\$2,768,265	\$462,478	19.75%

Cumulative, net money-weighted rates of return are depicted. Past performance is no guarantee of future results.

Investment Results Over Calendar Periods

■ Your Net Time-Weighted Returns

Period	Beginning Market Value	Deposits Minus Withdrawals	Investment Results	Ending Market Value	Your Net Time-Weighted Returns

The intent of the account purpose summary is to highlight the primary goal/purpose, time horizon and investment objective for your accounts. Please contact your financial advisor if you wish to review this information in more detail or if you feel there is a discrepancy.

Investment objective/Risk tolerance

All investors have goals that help guide their investment decisions. Investment goals typically have different time horizons and different income and growth needs. Generally, investment goals are on a spectrum, with "Income" investors typically holding the smallest percentage of higher risk investments, followed by "Growth and Income" investors holding some higher risk investments, and finally "Growth" investors holding a significant portion of their portfolio in higher risk investments. In addition, investors have different risk tolerances, independent of their income and growth needs. Risk tolerance is the amount of risk or loss an investor is willing and able to accept in order to achieve his/her financial goals and is measured on a continuum that increases from "Conservative" to "Moderate" to "Aggressive," and finally "Trading/Speculation." In determining an investment objective, it is important for you to assess your risk tolerance and your need for income and growth.

By aligning the risk tolerances with the investment needs, Wells Fargo Advisors offers clients nine different investment objectives from which to choose. While all investments involve some degree of risk, including the potential for loss of principal, some investments involve more risk than others. For example, higher risk investments may have the potential for higher returns, but also have the potential for greater losses. Please carefully review the descriptions at the back of the CFR report for each Investment Objective and select the one that most closely describes your risk tolerance, investment needs, and investment preference.

Get help to navigate the months ahead

After a rough beginning to 2022, investors have many questions. Will the rest of the year be more of the same? Will the Federal Reserve be able to tame inflation? Will higher interest rates lead to a recession?

Wells Fargo Investment Institute's "2022 Midyear Outlook: Faster, Further, and Fragile" addresses questions like these and provides forecasts for what potential opportunities, and risks, investors may encounter in the coming months.

Important information

This report is not the official record of your account. However, it has been prepared to assist you with your investment planning and is for informational purposes only. Your Client Statements are the official record of your accounts. Therefore, if there are any discrepancies between this report and your Client Statements, you should rely on the Client Statements. Unless otherwise indicated, market prices/values are the most recent closing prices available at the time of this report, and are subject to change.

This Account listing only represents a portfolio of assets and/or liabilities owned by you based on our records of transactions or supplemental information you have supplied. This report may not include all accounts or assets in your household. The information does not in any way supersede your statements or trade confirmations, which we consider the only official and accurate records of your accounts. We rely on you to review the accuracy and completeness of this analysis. This report may include assets/liabilities that you currently hold away from our firm; these assets may not be covered by SIPC. Information on assets held away was provided by you or a third party; while we believe this information to be reliable, its accuracy and completeness are not guaranteed.

Net invested capital is the market value of your account(s) at the beginning of a stated time period plus deposits and minus withdrawals.

Net money-weighted rates of return reflect your decisions to deposit assets to or withdraw assets from your account and are calculated after the deduction of program fees. They give more weight to returns in periods with higher portfolio values and, as a result, should not be used to measure performance of an investment manager.

Net time-weighted returns are independent of the timing and magnitude of your cash flow decisions and are calculated after the deduction of program fees.

Account purpose: When you opened this account, we likely discussed its purpose and your intentions for these assets. If the purpose has changed or become more specific, we'll want to make that update.

Investment Time Horizon: Accounts will have different time horizons based on investment goals/objectives. A long-term time horizon would be considered ten years or more. An intermediate time horizon would be five to ten years. A relatively short time horizon would be three to five years. A very short time horizon would be one to three years. An immediate time horizon would be less than one year.

Liquidity Needs: Liquidity need represents the extent to which a customer desires the ability or has financial obligations that dictate the need to quickly and easily convert to cash all or a portion of an investment or investments without experiencing significant loss in value from, for example, the lack of a ready market, or incurring significant costs or penalties.

INCOME: Portfolios emphasize current income with minimal consideration for capital appreciation and usually have less exposure to more volatile growth assets.

Conservative Income - Conservative Income investors generally assume lower risk, but may still experience losses or have lower expected income returns.

Moderate Income - Moderate Income investors are willing to accept a modest level of risk that may result in increased losses in exchange for the potential to receive modest income returns.

Aggressive Income - Aggressive Income investors seek a higher level of returns and are willing to accept a higher level of risk that may result in greater losses.

GROWTH AND INCOME: Portfolios emphasize a blend of current income and capital appreciation and usually have some exposure to more volatile growth assets.

Conservative Growth & Income - Conservative Growth and Income investors generally assume a lower amount of risk, but may still experience losses or have lower expected returns.

Moderate Growth & Income - Moderate Growth and Income investors are willing to accept a modest level of risk that may result in increased losses in exchange for the potential to receive modest returns.

Aggressive Growth & Income - Aggressive Growth and Income investors seek a higher level of returns and are willing to accept a higher level of risk that may result in greater losses.

GROWTH: Portfolios emphasize capital appreciation with minimal consideration for current income and usually have significant exposure to more volatile growth assets.

Conservative Growth - Conservative Growth investors generally assume a lower amount of risk, but may still experience increased losses or have lower expected growth returns.

Moderate Growth - Moderate Growth investors are willing to accept a modest level of risk that may result in significant losses in exchange for the potential to receive higher returns.

Aggressive Growth - Aggressive Growth investors seek a higher level of returns and are willing to accept a high level of risk that may result in more significant losses.

Trading & Speculation - Trading and Speculation investors seek out maximum return through a broad range of investment strategies, which generally involve a high level of risk, including the potential for unlimited loss of investment capital.
